

TRACE Bootstrap 10 - Infrastructure: Wonder, Safety, and Living Systems v1

Status: active bootstrap source companion. Not validation. Not proof. Not a new operator.

Core: infrastructure is a maintained constraint system over time, not merely an object.

Cragside: technical wonder can hide basement routing and immature safety.

Rail signalling: mature safety embeds correction before hazard entry.

Jodrell Bank: living scientific infrastructure survives through maintenance, calibration, and upgrade.

infrastructure_law: impressive systems are only good when supported by honest provenance, fail-safe constraints, trusted record, repair capacity, and future-space without hidden sacrifice.
