

Samwise Gamgee — Carrying the Load

TRACE Bootstrap v1 — teaching case (orientation, not validation)

Author: Framework (with Mark) — Date: 15 June 2026

Core Pattern

```
TITLE := "Carry the Load, Not the Ring"
```

```
Samwise :=  
  high_constraint_agent  
  + low_power  
  + high_reliability
```

```
mission :=  
  preserve_carrier(Frodo)  
  + maintain_path_to_completion
```

```
key_operator :=  
  carry_when_other_fails
```

Context

The system is a long-duration mission under extreme pressure.

```
environment :=  
  hostile  
  + resource_limited  
  + psychologically_corrupting
```

```
primary_threat :=  
  internal_collapse  
  > external_enemy
```

State Space

```
state :=  
  x_t :=  
    (Frodo_condition,  
     Sam_condition,  
     distance_to_goal,  
     resource_level,  
     corruption_pressure)
```

Input Stream

```
S_t :=  
  terrain  
  + enemy_presence  
  + Frodo_degradation  
  + fatigue  
  + hope_signal
```

State Update

```
x_(t+1) =  
  f(x_t, S_t)
```

```
degradation :=  
  Frodo_condition ↓  
  + Sam_condition ↓
```

```
uncertainty :=
```

high

Action Policy

```
u_t :=
  support
  + carry
  + defend
  + encourage
  + ration_resources

policy :=
  maximise mission completion
  not personal survival
```

Key Operator

```
if Frodo_capacity < threshold:
  Sam := carry(Frodo)
```

Dynamic load transfer maintains system viability.

Constraint Layer

```
constraint :=
  do_not_take_ring

temptation :=
  power_gain

decision :=
  reject_shortcut
```

Failure Modes

```
failure_1 :=
  Frodo collapse

failure_2 :=
  Sam takes ring

failure_3 :=
  loss_of_hope
```

Stabiliser

```
hope_signal :=
  small
  + persistent
```

Flow Interpretation

```
world :=
  pressure_flow

Sam :=
  constraint_maintainer

action :=
  redistribute_load
```

Compression

```
core_law :=
  systems survive by
  moving load
  not eliminating it
```

Rosetta Updates

```
add :=  
  load_operator  
  + transfer_function  
  + constraint_under_temptation  
  + minimal_hope_signal
```

```
note :=  
  teaching_case_only
```
