

TRACE Bootstrap 11 - Energy: Surplus, Recursion, and Future-Space v1
Status: active bootstrap source companion. Not validation. Not proof. Not a new operator.

Core: energy is capacity to change state.

Surplus can speed correction, preserve redundancy and fund maintenance, or accelerate harm and hide cost.

K_energy asks whether source, route, cost, authority, timing, enforcement, and repair remain visible and answerable.

Mandelbrot role: analogy for recursive local rules under feedback and boundary, not proof.

Free will boundary: capacity makes choices executable, but this does not prove metaphysical free will.

energy_law: ethically relevant energy is capacity routed through visible cost, live correction, repair capacity, constraint, and future-space preservation.
